

CK1160-2X > Electric Outputs

The versatile CK1160-2X can handle a variety of kiln types. Highly customizable, the controller can operate 24VDC, 24VAC, or 120VAC actuators and starters found in conventional and dehumidification kilns, and predryers. Due to the highly flexible nature of the single-loop controllers, the control possibilities are nearly endless.

If you don't see the particular configuration you are looking for, no problem! Nearly every controller and installation we do is a custom job. Maybe you have a 24VAC powered, 0-10VDC controlled heating valve? No problem! 120VAC powered open/close vents with a separate fan control? Got you covered. Please inquire so we may give you a quote for your particular needs...we can build a controller for YOUR individual situation!
